

High Performance.
The same can be said
of our operating results.
Strong, sustainable
growth and profitability.
Unlimited opportunity
for the future.

Consolidated Historical Performance

Flow Control

Design, manufacture, testing and qualification of severe service valves, pumps, motors, generators, instrumentation and controls used to regulate the flow of liquid, gases and vapors in severe marine, industrial and nuclear environments.

Products and Services

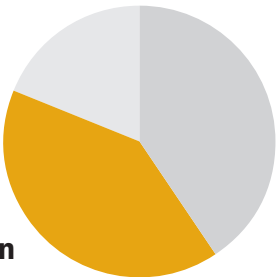

- Nuclear/non-nuclear valves (butterfly, globe, gate, control, safety, relief, solenoid)
- Processing industry valves, including coke drum unheading, catalytic cracking systems, relief valves
- Nuclear/non-nuclear pumps, motors and instrumentation and controls
- Nuclear/non-nuclear marine service generators
- Marine secondary plant propulsion systems
- Electromechanical equipment, including aircraft launch and recovery systems, ElectroMagnetic gun, elevator drives
- Aircraft carrier flight-critical components
- Nuclear reactor plant containment air locks and doors, fasteners and bolting solutions
- Engineering, inspection, testing and qualification services
- Process safety management software

Major Markets

- U.S. Navy nuclear and non-nuclear programs
- Commercial power generation (nuclear and fossil)
- Oil and gas exploration, production and refining
- Petrochemical and chemical processing
- Natural gas production and transmission
- Pharmaceutical
- Automotive/truck
- Department of Energy waste treatment facilities

Motion Control

Innovative and highly engineered mechanical, electromechanical and electronic components and subsystems providing flight and drive control actuation, fire control, sensors and graphic data displays for aerospace, defense and industrial applications worldwide.

Products and Services

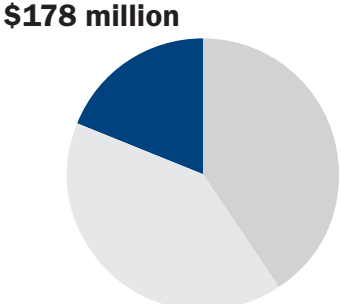

- Secondary flight control actuators
- Weapons bay door actuation systems
- Integrated weapons hoisting systems
- Aircraft utility actuation systems
- Integrated mission management and flight control computers
- Single board embedded computing cards and graphic solutions
- Fractional horsepower (HP) specialty motors
- Force transducers
- Fire detection and suppression control systems
- Digital electromechanical aiming and stabilization systems
- Hydropneumatic suspension systems
- Fire control, sight head, and environmental control processors for military ground vehicles
- Linear and rotary position sensing devices
- Power conversion products
- Control electronics
- High-performance data communication products
- Component overhaul and logistics support services
- Perimeter intrusion detection equipment
- Fuel valves for large HP marine engines
- Servo valves and controllers
- Control handles, joysticks and throttle quadrants

Major Markets

- Commercial jet transports
- Business/regional jets
- Military transport and fighter aircraft
- Ground defense vehicles
- Unmanned aerial vehicles
- Automated industrial equipment
- High-speed trains
- Marine propulsion
- Space programs
- Security systems
- Naval ships
- Homeland security
- Air, sea and ground simulation

Metal Treatment

Specialized metal treatment services that extend the life and improve the performance of critical components used in the aerospace, ground transportation, power generation, oil and gas industries.

Products and Services

- Shot peening
- Shot peen forming
- Laser peening
- Heat treating
- Specialty coatings
- Reed valve manufacturing

Major Markets

- Commercial jet transports
- Business/regional jets
- Military transport and fighter aircraft
- Automotive/truck
- Power generation
- Oil and gas exploration
- Architectural structures
- Agricultural equipment
- Construction and mining equipment
- Industrial processing equipment
- Medical devices
